Compass Healthcare Streamlines Remote Management for Doctors' Offices

Compass Healthcare is dedicated to providing advanced care to patients across 14 independent health offices. Each office has its own unique culture and capabilities—which means that it also has its own budget and technology needs. Since deploying the Intel vPro® Platform manageability tools, Compass Healthcare has seen a streamlined provisioning and troubleshooting process. Now preparing a laptop for a healthcare professional takes an IT technician mere minutes and the team can troubleshoot issues remotely. As IT spends less time troubleshooting or traveling to locations to help users, they can spend more time on strategic initiatives. Implementing the Intel vPro platform was a strategic decision meant to help Compass Healthcare long-term with a solution, so that employees have the tools they need to focus on patient care.

"vPro has dramatically helped us save time and stress as a tech team. It has improved our employees' ability to get work done, and it's going to save us a good amount of money.

Carl Seabold, director of IT and security officer, Compass Healthcare,
